Db4o Windows Service (.NET)

Usage

DB4ONETSERVICE.EXE /install /run /uninstall
  /install   Installs as a Windows Service (Configured to use the Network Service account)
  /run   After installing, start the service
  /uninstall   Uninstalls the Windows Service.

Must be run as an administrator.
The Shortcuts /I, /R, and /U may also be used.

Configuration

The application .config file contains a few settings in the standard .NET XML config file format.

DatabaseFileName	Absolute or Relative (from the service EXE) path to the desired .db4o file. The service "Run As" account must have full access to this file path.
ListenPort	Which port number to run the db4o server on.
Username	The username which clients will be required to supply when connecting to this server.
Password	The password which clients will be required to supply when connecting to this server.
